## NAMIBIA'S LARGEST OIL AND GAS CONFERENCE RETURNS IN AUGUST

The Namibia Oil and Gas Conference will take place in Windhoek from 20-22 August 2024.

With over 800 delegates, key industry stakeholders and players together under one roof, the first Namibia Oil and Gas Conference in 2023 was a resounding success – fuelling knowledge and innovation.

The conference laid the solid foundations of a strategic roadmap for guiding both the public and private sectors on how Namibia can best benefit from investments in the sector.

The event is hosted by the Economic Association of Namibia (EAN), in partnership with the Namibia Investment Promotion and Development Board (NIPDB) and the Hanns Seidel Foundation (HSF), with the strategic partnership of the National Petroleum Corporation of Namibia (NAMCOR).

The conference also has the official endorsement of Namibia's, Ministry of Mines and Energy. The innovative programme features two days of strategic discussions delivered by more than 70 speakers.

The conference-themed; The Next Steps Towards a Prosperous Oil and Gas Industry, is another all-encompassing event and offers unparalleled opportunity for local and global investors to connect, develop and sign deals and partnerships.

The conference-themed; The Next Steps Towards a Prosperous Oil and Gas Industry, is another all-encompassing event and offers unparalleled opportunity for local and global investors to connect, develop and sign deals and partnerships.

## FROM PAGE 1 OIL & GAS CONFERENCE IN WINDHOEK

A full programme of national and international speakers will share their insights and analysis, exploring issues around the status of Namibia's oil and gas industry, powering the future and unleashing Namibia's energy revolution, local content, infrastructure and logistics, as well as Namibia's role in global oil and gas markets, procurement transparency, people and skill development.

In addition, and new for 2024, the Namibia Oil and Gas Conference will further foster skills development and capacity building in the oil, gas and energy sectors by hosting several dedicated workshop sessions before the main summit on 20th August.

Speaking at the official media launch in Windhoek on 27 May, Economic Association of Namibia Chairman, Jason Kasuto explained; "The 20 – 22 August 2024 will signify a landmark three days of engagement, empowerment, and energy.

The 2nd edition of the Namibia Oil and Gas Conference under the theme: The Next Steps Towards a Prosperous Oil and Gas Industry comes to fruition based on unparalleled demand by industry players (international and local); public, private, academia and civil society stakeholders, as well as the general Namibian public from local entrepreneurs; to professionals across diverse sectors as well as the youth. The message is: Let's fill the information gap; let's network; let's participate."

He further added; "With over 70 renowned speakers covering relevant topics, panel discussions, master classes, exhibitions, the mission of the Economic Association of Namibia is clear that: the Namibia Oil and Gas Conference 2024 has a strong focus on proposing ideas and strategies that will ensure that investments in the sector will not create an enclave around oil and gas production sites, but that investment will lead to the development of an integrated industrial base with backward and forward linkages to the rest of the economy, thus creating sustainable value chains, jobs and uplifting the living standards of Namibia's people."

## WORLD BANK REAFFIRMS SUPPORT FOR NAMIBIA AND SOUTH AFRICA

A statement issued by the World Bank's office in Pretoria, it was stated that a delegation of the World Bank Group's (WBG) Board of Executive Directors (EDs) noted South Africa's and Namibia's progress in achieving their development goals and re-affirmed World Bank Group's commitment to providing support. The 11 EDs and Alternate EDs were hosted by the World Bank and International Finance Corporation (IFC) country offices during their recent visit on July 7-13.

The visit provided a platform to assess progress with projects and engage on the evolution of the World Bank Group's relationship with the countries, from a knowledge-focused to a broader knowledge and financing partnership. EDs met government and business leaders, local stakeholders, and project beneficiaries, and experienced first-hand how the countries manage development priorities and challenges. South Africa and Namibia have common challenges, including poverty, unemployment, and inequality. Throughout the visit, the delegation discussed the ongoing and future support from the World Bank Group to boost inclusive economic growth and job creation.

In Namibia, the World Bank Group is preparing a new Country Partnership Framework (CPF) with the government

that will strategically guide its support as the engagement continues to grow. The World Bank recently approved a \$138.5 million renewable energy and transmission loan to NamPower, after 15 years without borrowing.

Key highlights of the visit included: In Namibia, the delegation met with Minister of Finance and Public Enterprises, Mr Ipumbu Shiimi and key stakeholders, including development partners and the private sector.

The delegation visited informal settlements near Windhoek to gain insights on housing related issues, a sector where IFC is investing and which the government has identified as a priority for World Bank Group engagement.

Matteo Bugamelli, the World Bank's Executive Director who represents the constituency of countries including Albania, Greece, Italy, Malta, Portugal, San Marino, and Timor-Leste, expressed optimism about the countries' progress. He emphasized the World Bank Group's commitment to helping South Africa and Namibia address unemployment and inequality challenges. He particularly welcomed the increased financing to support the implementation of much needed reforms.

## WINDHOEK APPROVES 928 BUILDING PLANS WORTH N\$921.9 MILLION IN FIRST-HALF

The City of Windhoek approved 928 building plans during the first half of the year with a total value of N\$921.9 million, marking a 1.4% increase in number and a 30.0% increase in value compared to the same period in 2023.

IJG Securities reports that on a twelve-month cumulative basis, there has been a 16.3% decrease in the number of approvals and a marginal 0.1% decrease in value compared to the equivalent period from a year ago. Additionally, 98 building plans, valued at N\$50.5 million, were completed in the month. In June, the city approved a total of 149 building plans, a decrease of 20.7% from the 188 approvals in May.

The total value of June's approvals amounted to N\$109.0 million, which is 42.3% lower than May's approvals. Meanwhile, Windhoek's twelve-month cumulative number and value of residential approvals have been hovering above 330 units and N\$630.0 million for the past few months, with 334 units valued at N\$633.6 million approved by the end of June.

IJG Securities reveals that this is however 40.7% y/y lower in number terms, but 1.1% more in value terms when compared to the corresponding 12-month period a year ago.

## BIOMASS FAIR 2024 SET FOR AUGUST

The Standard Bank Biomass Fair 2024 is set to take place from 08 to 10 August 2024 in Otjiwarongo in the Otjozondjupa region.

The three-event organised by the Namibia Biomass Industry Group (N-BiG) and Charcoal Association of Namibia (CAoN), is tailored to nurture and promote the thriving biomass sector in Namibia and the region.

The 2024 Standard Bank Biomass Fair is aimed at updating biomass stakeholders and the public at large on the sector developments, explains Progress Kashandula, chief executive of N-BiG on behalf of the implementing partners.

"The bush biomass sector already contributes extensively to socio-economic development in Namibia and has the potential to shape an inclusive bioeconomy. The fair is the most important knowledge exchange platform for the sector and provides an excellent opportunity for networking."

The fair will bring together industry experts, researchers, and both public and private stakeholders for knowledge exchange, networking, and the showcasing of cutting-edge harvesting and processing technologies for bush biomass.

Standard Bank Namibia is honoured to reaffirm its unwavering commitment to sustainable energy solutions and the pivotal role of the biomass industry in promoting a greener future.

Erwin Tjipuka, chief executive at Standard Bank Namibia, emphasised the bank's dedication to supporting innovative and eco-friendly initiatives that align with Namibia's environmental goals.

"The biomass industry is crucial for fostering sustainable energy practices and addressing climate change. By supporting the biomass fair, we are not only investing in the future of renewable energy but also contributing to the socio-economic development of our nation. We are proud to be at the forefront of this transformative industry, supporting initiatives that not only benefit the environment but also enhance the livelihoods of Namibians."

Together, we can ignite the growth of the biomass sector and pave the way for a sustainable and prosperous future", he said.

On Thursday, 8 August 2024, the Biomass Conference will explore vital aspects such as access to local and international markets, harvesting and processing technologies, bush-biomass products and technical services, research and innovation for the industry.

It will feature local, regional, and international speakers. Attendees can expect to gain valuable insights into emerging trends and seize opportunities in the industry.

## REPO RATE MAINTAINED AT 7.75 PERCENT

On the 17<sup>th</sup> and 18<sup>th</sup> of June 2024, the Monetary Policy Committee (MPC) of the Bank of Namibia held its third bi-monthly meeting for 2024 to decide on the appropriate monetary policy stance to be implemented over the next two months.

To continue safeguarding the peg between the Namibia Dollar and the South African Rand while supporting the domestic economy, the MPC decided to hold the Repo rate steady at its current level of 7.75 percent.

This decision was made following a comprehensive review of domestic, regional and global economic developments.

Domestic economic activity increased during the first four months of 2024. Inflation slowed year-to-date but edged higher since the previous MPC meeting, while the growth in Private Sector Credit Extension (PSCE) remained subdued. The merchandise trade deficit widened, while the stock of international reserves remained sufficient to support the currency peg and meet the country's international financial obligations.

Global output maintained positive growth in the first quarter of 2024, and it is projected to remain resilient throughout the year. Some inflationary pressures persisted in both the advanced economies and the emerging market and developing economies.

## NATIONAL YOUTH COUNCIL LAUNCHES NEXTGEN FACILITY TO EMPOWER ENTREPRENEURS

The National Youth Council of Namibia, in partnership with Bellatrix Investment Managers, recently unveiled the Next Generation of Entrepreneurs (NextGen) Facility. This initiative aims to provide collateral-free business finance ranging from N\$50,000 to N\$100,000 over a three-year term to between 20 and 30 young entrepreneurs. The NextGen Facility will offer comprehensive financial and non-financial support to Micro, Small, and Medium Enterprise (MSME) youth entrepreneurs. By creating a supportive ecosystem for youth-led enterprises, the Council envisions contributing to poverty alleviation and fostering economic growth in Namibia.

MSMEs will be targeted in the ideation phase with strong business cases and existing businesses seeking support to enhance their growth trajectories. Youth entrepreneurs must enrol in and complete the NextGen Incubation Programme to qualify for financing.

## CIVIL SERVANTS RECEIVE 28 GOREANGAB HOUSES

The Ministry of Urban and Rural Development handed over 28 new houses in Windhoek's Goreangab Extension 4 to public servants as part of the Informal Settlement Upgrading Pilot Project (ISUPP) on Friday.

The ministry's executive director Nghidinua Daniel said, the project targets low-income earners, and these houses were particularly meant for soldiers, police officers, nurses and teachers.

He confirmed, "The 28 houses are a combination of two-bedroom freestanding and one-and-two-bedroom flats that would cater for various income levels of our beneficiaries".

Minister Erastus Utoni said: "We have entrusted the construction part to the City of Windhoek and the National Housing Enterprise to continue the excellent work they have been doing for the past three years".

## GLOBAL HYDROGEN SUMMIT SET FOR SEPTEMBER

The Global African Hydrogen Summit will focus on the role Africa expects to play in the global hydrogen economy.

The summit will take place in Windhoek from 3 to 5 September, under the theme 'From Ambition to Action: Fuelling Africa's Green Industrial Revolution'.

A recent report co-authored by McKinsey and Company and the Hydrogen Council shows how Africa enjoys world-class renewable resources, with capacity factors up to 69% for wind power and 25% for solar power.

The inaugural event forms part of Namibia's COP28 programme and will be hosted by the Namibia Investment Promotion and Development Board, the Environmental Investment Fund of Namibia, DMG events and Vasco Da Gama Energy.

The continent also has excellent geothermal and hydro resources, coupled with abundant land area.

Consequently, the continent is strongly positioned to become a renewable hydrogen and derivatives producer and exporter.

The summit's head of marketing Roshan Jan-Mahomed says Africa holds the key to decarbonising the global energy system and can become a leading player hydrogen produced from renewables.

Several African countries, including Angola, Djibouti, Egypt, Ethiopia, Kenya, Mauritania, Morocco, Nigeria, Namibia and South Africa, are actively pursuing clean hydrogen production goals.

There are many challenges to overcome to establish a sustainable and economically viable hydrogen economy. The most fundamental and urgent obstacles to overcome as a priority include financing and investment,

## NHE HANDS OVER 119 HOUSES AT SWAKOPMUND

The minister of urban and rural development, Erastus Utoni, through the National Housing Enterprise (NHE) handed over 119 houses at Swakopmund to new owners on Monday.

The houses are part of 505 housing units that have been standing uncompleted in the town's Matutura Extension 9 area for years due to a legal dispute between the main building contractor and subcontractors.

Utoni said the completion of the houses is due to the hard work and teamwork of the new appointed contractor, New Era Investments, and the Ministry of Urban and Rural Development. "The 119 houses whose handing-over we are witnessing today are the last batch of the 319 houses that were handed over to New Era Investments for completion", Utoni said.

Utoni said the cabinet last year in November approved a revised national housing policy with a five-year implementation action plan. The policy gives special attention to the improvement of conditions in informal settlements and the needs of identified target groups, notably the ultra-low, low and middle income groups. "We are doing everything possible to have the remaining 572 commenced. These consist of 186 houses here at Swakopmund, 362 units at Otjomuise Extension 10 in Windhoek and 24 units at Opuwo". Utoni stated. Source: <https://www.namibian.com.na/nhe-hands-over-119-houses-at-swakopmund/>

## CONSTRUCTION WORST HIT AS COMPANY INSOLVENCIES RISE AGAIN IN JUNE

The number of registered company insolvencies in England and Wales in June 2024 was 2,361, 16% higher than in May 2024 and 17% higher than the same month in June 2023.

The number of company insolvencies remained much higher than those seen both during and in the five years before the Covid-19 pandemic.

### Construction Insolvencies

Construction is the worst hit sector, registering the most insolvencies of any UK industry. It had almost one in five of all companies going out of business, with 17.3% of the total.

In the construction industry there were 4,287 company insolvencies in the 2023 to June 2024. Businesses involved in specialist construction accounted for most insolvencies with 211 going out of business in May 2024 – the month with the latest breakdown of figures.

Specialist firms include those carrying out demolition and site preparation, building finishing, including trades and installers and other specialist activities.

Meanwhile, firms involved in the development of building projects and the construction of residential and non-residential buildings saw 126 insolvencies in May 2024.

One in 179 companies on the Companies House effective register (at a rate of 55.8 per 10,000 companies) entered insolvency between 1 July 2023 and 30 June 2024.

This was an increase from the 55.1 per 10,000 companies that entered insolvency in the 12 months ending 30 June 2023. Company insolvencies in 2023 and the first half of 2024 are at levels last seen during the 2008-09 recession.

## INCREASED COMPETITION, CHALLENGES FACING SOUTH AFRICAN CEMENT SECTOR

Cement producer Sephaku Cement notes that, over the last 20 years the cement industry has evolved and fragmented, which has, in part, resulted in challenges related to ineffective enforcement of regulation and excess capacity in South Africa (SA).

The company explains that the cement industry has evolved from four integrated producers to six integrated producers, 11 cement blenders and five or six importers.

Sephaku chief executive officer, Duan Claassen notes that, in total, between all entities involved in the selling and distribution of cement in South Africa, there are over 80 different types of cement and/or brands on the market.

"While in its own right, this increased fragmentation is a challenge, one could argue that it has created a more competitive environment, which ultimately should benefit the consumer", elaborates Claassen.

## U.S. CONSTRUCTION INDUSTRY SHOWS STABILITY AND STRENGTH IN 2024

The U.S. construction industry has shown resilience despite global challenges and the industry is adjusting to new patterns of demand, indicating variations in growth. JLL's new 2024 midyear construction update and reforecast details how the year has unfolded so far compared to original predictions and re-forecasts what is expected in the second half of 2024.

Construction costs have stabilized in 2024 due to backlog-conscious contractors and improved material conditions. Though construction starts remain slow in some locations, and not all sectors are performing equally well, construction spending is up, and some interest rate holdouts are moving on long-deferred projects.

"The construction industry in the U.S. is incredibly nuanced, and major changes to the built environment are happening now, driven by shifting economic and industry dynamics", said Julie Hyson, Americas Portfolio Clients, Services and Industries Lead, Project and Development Services, JLL. "Spending is up more than originally anticipated interest in projects has increased".

Regarding interest rates, "higher for longer" is still the working paradigm, even with some rate cuts on the horizon; the era of near-zero interest rates is not likely to return. Private sector construction spending is increasing, aided by some loosening of capital, and public spending has also provided market stability. Infrastructure investment and post-pandemic economic recovery will continue to support the construction industry for years to come, both directly and indirectly.

Source: <https://www.us.jll.com/en/newsroom/us-construction-industry-shows-stability-in-2024>

However, he adds that the increased fragmentation brings the first existential threat to the industry, being the ineffective enforcement of regulations and quality standards.

South African cement standards – which mirror the European standards – are well structured. However, Claassen points out that there are some market participants that violate the regulations by producing cement products that fall significantly below the minimum standard. "These cements proliferate particularly in lower income areas, where the pressure on the purse is at its highest." He adds that a lack of consumer knowledge on this topic can significantly increase the risk of failures, leading to serious incidents.
